CPS 240 (22161280)   Assigned October 18, 2011
Homework 6 (40 Points)   Due October 20, 2011

1   Problem

We will be building a graphical rubric and grade sheet editor. In your project directory there are examples of the current rubric and grade sheet files. In this assignment you will do the following:

1. Create an ArgoUML diagram for a proposed set of classes to model the rubric and grade sheet based on the discussion in class on October 18.

2. In a **text** file identify any patterns you propose to use to build the models.

We will discuss proposals in lecture on October 20, 2011.

2   Deliverables

You will submit your project via subversion. The url for your folder is `https://cps-svn2.cps.cmich.edu/cps240_22161280/trunk/hw06/<username>` where `<username>` is your globalid. Remember to do an `svn add` for each new file and then a `svn commit` to push the files to the repository.

3   Notes

You can find installation and use instructions for Subversion from `http://subversion.apache.org/`. A Windows interface is available from `http://tortoisesvn.net/`.

The sooner you complete this assignment the better. Failure to have Subversion working is **not** a valid excuse for late or unsubmitted work.
